

The logo for AGMRI, with 'AG' in green and 'MRI' in white, set against a blue background with a network of white lines.The word 'NVision' in white, with a stylized orange 'V' that incorporates a circular graphic element.

Nitrogen Management

How NVision Works

- Transforms **imagery-based insights** into **in-season nitrogen recommendations**.
- Converts **nitrogen loss estimates** directly into **yield loss projections**.
- Automatically enables the creation of an **N application pass** within the AGMRI tool.

Why NVision Beyond Full Season

- **Direct integration** with AGMRI imagery—NVision doesn't require external inputs.
- Moves **from insight to action** seamlessly, all in one platform.
- Enables **tailored management**: customize N passes to fit operational preferences.

Customizable & Variable Rate Capabilities

- Offers **full control** over:
 - Application zones
 - Rate thresholds
 - Product types and rates
- Supports **variable rate scripting**, making recommendations economically and agronomically efficient.
- Files are exportable for **in-field execution** with most major **application equipment**.

Perfect Complement to AGMRI

- Bridges the gap between **diagnostics and decision-making**.
- Leverages AGMRI's imagery to **pinpoint variability** and NVision to **respond with precision**.
- Supports in-season decision-making with **real-time intelligence**.
